### **III. Realizare remarcabilă**

(Descrieți într-o manieră cât mai accesibilă (în maximum 1 pagină) cea mai importantă realizare științifică/tehnică/artistică din ultimii 5 ani și impactul acesteia.)

Consider drept cea mai importanta realizare stiintifica al ultimilor 5 ani (cu impact considerabil) rezultatele obtinute in extinderea principiului variational al lui Ekeland pentru probleme de echilibru.

Dupa cum se cunoaste din teorema lui Weierstrass, functiile inferior semicontinue poseda puncte de minim pe orice compact. In teoria optimizarii insa, majoritatea modelelor matematice provenite din practica nu verifica ipoteza de compactitate a multimilor pe care se cauta minimul functiilor de scop. Compactitatea, la randul ei este o conditie destul de restrictiva chiar si in spatii finite dimensionale, datorita ipotezei de marginire. Principiul variational al lui Ekeland, publicat in 1974 a constituit punctul de plecare pentru o cercetare profunda, dinamica si moderna. In acest rezultat nu se presupune compactitatea multimii, iar pe de alta parte se asigura ca in anumite conditii o perturbare arbitrar de mica a functiei in cauza va duce la existenta a cel putin unui punct de minim. Acesta la randul implica faptul ca functiile inferior semicontinue poseda puncte aproximative de minim. Rezultatul, pe langa aplicatiile sale interesante are si o interpretare geometrica frumoasa.

Problema echilibrului, intens studiata de subsemnatul in ultimii 5 ani, contine cazuri particulare importante, printre care se numara si problemele de minimizare. Dat fiind faptul ca principiul variational al lui Ekeland se refera (asa cum s-a amintit mai sus) la probleme de minimizare, apare in mod natural intrebarea: poate fi acest principiu stabilit si pentru cazul mai general al problemei de echilibru? In caz afirmativ, in ce ipoteze? Ce aplicatii interesante poate sa aduca un astfel de rezultat? Subsemnatul a abordat aceste intrebari impreuna cu doi coautori din Italia (Monica Bianchi si Rita Pini), obtinand rezultate in doua lucrari (trecute si in lista de la Criteriul I, pct. 1):

- (a) Monica Bianchi, **Gábor Kassay** and Rita Pini: *Existence of equilibria via Ekeland's principle*, **Journal of Mathematical Analysis and Applications** **305** (2005), pp. 502-512. Factor de impact: 1.046 si
- (b) M. Bianchi, **G. Kassay** and R. Pini: *Ekeland's principle for vector equilibrium problems*, **Nonlinear Analysis** **66** (2007), pp. 1454-1464. Factor de impact: 1.295.

In lucrarea (a) s-au obtinut rezultate asupra problemei de echilibru – forma scalara. Dupa ce s-a demonstrat principiul variational al lui Ekeland pentru astfel de probleme (rezultatul extinde pe cel clasic), s-a obtinut ca aplicatie un rezultat de existenta pentru problema de echilibru pe multimii compacte dar fara ipoteze de convexitate pentru functia in cauza, fapt neintalnit pana la acel moment. Tot aici se arata existenta solutiilor aproximative – si in anumite ipoteze, exacte – pentru un sistem de probleme de echilibru – forme scalare.

Lucrarea (b) poate fi considerata ca o continuare a cercetarilor incepute in articolul (a). In ultimii ani, principiul lui Ekeland a fost studiat si extins pentru probleme de optimizare vectoriala de mai multi autori. Scopul principal al lucrarii (b) a fost obtinerea de rezultate de tip Ekeland pentru probleme de echilibru – forma vectoriala - care sa extinda atat rezultatele obtinute pentru problemele de optimizare vectoriala , cat si rezultatele proprii pentru problema de echilibru – forma scalara (cele din lucrarea (a)).

Ambele lucrari au fost prezentate atat de subsemnatul cat si de coautorii sai la numeroase conferinte internationale de prestigiu. Asa cum reiese din lista citarilor de mai sus, lucrarea (a) fost citata in 9 articole, pe cand lucrarea (b) in 7 articole.
