III. Realizare remarcabilă

(Descrieți într-o manieră cât mai accesibilă (în maximum 1 pagină) cea mai importantă realizare științifică/tehnică/artistică din ultimii 5 ani și impactul acesteia.)

Majoritatea dispozitivelor de calcul sunt digitale și folosesc curentul electric pentru a efectua operații. O altă idee este de a folosi lumina (sau alte semnale) pentru a rezolva probleme. Cursa pentru calculatoarele optice a început în 1939 când au fost patentate primele dispozitive pentru Recunoașterea Optică a Caracterelor. Calculul optic prezintă avantaje în unele situații. Un avantaj este faptul că fotonii sunt nativ în mișcare, pe când electronii le trebuie o diferență de potențial.

Am propus în 2006 un dispozitiv optic care rezolva o problemă NP-completă în timp polinomial.

Principala dificultate este legată de construirea unui graf care să indice felul în care lumina trebuie să parcurgă acel graf pentru a genera toate posibilele soluții ale unei probleme. Pentru problema drumului hamiltonian, graf-ul-dispozitiv are aceeași structură ca și graf-ul pe care se cere soluția. În fiecare din noduri raza de lumina este marcată cu o anumită valoare. Pe arce fiecare semnal este întârziat cu o anumită cantitate.

Am propus (împreună cu Oana Muntean) mai multe dispozitive optice care să rezolve anumite probleme NP-complete: submultime de sumă dată (simple și generalizată), rezolvare de ecuații Diofantine, acoperire exactă, acoperirea unei suprafețe cu piese de orice formă etc.

Pe această idee cu dispozitive optice am publicat mai multe articole (4 în reviste ISI) și 3 în conferințe ISI proceedings.

De asemenea am organizat 2 workshop-uri de calcul optic: în 2008 în Viena și 2009 în Bertinoro, Italia.
