June 2024

The analysis of the insertion of graduates of the Babeş-Bolyai University (BBU) has been carried out annually since 1998, initially targeting only bachelor graduates. Since 2013, the study has been extended to master's and doctoral school's graduates, specific questionnaires have been developed for each level of studies.

Starting 2019, the questionnaires are filled in online, the process being carried out according to the dedicated procedure, adopted by Administration Council Decision of the Board of Directors 5881 / 08.04.2019.

The population targeted by this study consists of the 11.476 UBB graduates in the year of 2021 (Table 1): bachelor level graduates who passed the bachelor's exam, master level graduates who passed the dissertation exam and doctoral school graduates who publicly defended their PhD thesis.

Results

The status of UBB graduates on the labor market 12 months after graduation shows that, during 2012-2021, most graduates (almost 90%) declared they have been employed (Figures 1-3).

However, we note that:

- ✓ by „employed” we understand: graduates continuing their studies, who took a job, or who continued their existing jobs, as well as graduates who set up their own business and former graduates working independently;
- ✓ by „unemployed” we understand graduates in search of a job who did not secure it, graduates who did not find a job within 12 months after graduating from bachelor studies.

Most of those included in the „employed” category, declared they are employed, the share of those having a business / working independently being much smaller (Figures 4-6). In addition, over 50% of the bachelor graduates declared that they continued their studies. In case of master graduates, the share is over 10% (Figure 7).
